

Krasnobryzhyy I.V. Visual unified algorithm of making criminal analysis by National police officers to improve the efficiency of combating crimes. The questions of construction of the most optimal criminal analysis algorithm by the employees of the National Police, which should improve the effectiveness of the fight against criminal manifestations, are considered.

According to the author, using law enforcement agencies to obtain and prioritize the analytical processing of the data obtained, the law enforcement agencies will greatly improve the effectiveness of their activities. He considers it necessary to intensify the training of future policemen and to conduct additional practical courses with practical law enforcement officers in the field of search and analytical processing of information resources from a variety of sources
