

Kirilenko F. O. Dynamics of crimes committed in 1960–2018 per 10,000 population. Regardless of the type of state, crime was, is, and will be. Crime is generally explored by analyzing the number of crimes and the number of convicts. In general, the criminal situation in Ukraine in the period 1960-2018 is characterized by a stable tendency to increase the number of reported crimes. However, this trend was not uniform and in some years there was a decrease in crime rates. The overall crime rate can be traced to the tables that supplemented the submissions.

This study was prepared based on statistics from the Ministry of Internal Affairs of Ukraine, which reflects the level of crimes committed in 1960–2018 with a population of ten thousand. The focus is on the dynamics of reported crimes during this period.

The purpose of the article is to investigate, evaluate and publish statistics that show the dynamics of crimes perpetrated in Ukraine by ten thousand people in the 1960-2018 period.

Elements of the scientific novelty of this study are the information base, as the work is based on the results of the reporting data of the Ministry of Internal Affairs of Ukraine. The information provided covers a range of issues pertaining to crimes perpetrated in Ukraine by ten thousand people per year.

The materials can be useful for officials and officials of state bodies, local self-government bodies, public activists, journalists, scientists, etc., who deal with the problems of legal statistics, as well as in the research sphere, in the educational process, etc. The study is based on the official statistics of the Interior Ministry of Ukraine 1960-2018. Materials are supplemented by primary statistics.

The study, which is based on the results of the study of the reporting data of the Ministry of Internal Affairs of Ukraine and reflects the level of crimes committed in 1960-2018 with the rate per ten thousand population, allows to judge the work of its individual services and units for crime detection, etc. during this period and will be useful in predicting the dynamics of crime and developing evidence-based measures to prevent these types of crime.

Keywords: crime rate, crime factor, absolute indicators, dynamics, population.
